

# What is Lean Healthcare Transformation?

The Lean Healthcare Transformation is based on the usage of the Toyota Production System where Lean manufacturing techniques are used to train Hospital Administrators, LPN's, RN's, or Healthcare professionals in tools that will eliminate and reduce the following:

- Waiting
- Confusion
- Non-value-added processing
- Excess inventory
- Defects
- Excess motion
- Underutilizing people's Knowledge, Skills and Abilities
- Patient wait times
- OR/ER wait times
- Wasted or repetitive motion

*...while increasing safety for patients, and staff.*

*At the end of every healthcare process, there is a patient.*

## With training from 6SigmaTek, you will learn how to:

- Decrease patient turnaround times for diagnostic testing
- Reduce lab turn-around time
- Decrease the number of hospital acquired conditions (HACs) including pressure ulcers and infection
- Reduce GLOS and ALOS for patients
- Improve nursing workflow by reducing non-value added activities
- Increase patient “touch time” by decreasing process waste
- Reduce/eliminate blood culture contamination
- Reduce the time it takes for physician clinics to return calls and messages to patients
- Increase ER Patient Flow to maximize thruput and potential revenue
- Reduce CLABSI / CAUTI occurrences
- Consistently achieve higher quality scores
- Increase revenue by creating efficiencies that increase the bottom line
- Decrease OR wait-times from pre-op to recovery
- Increase safety in the sterile processing department
